Compressed Air Safety

Compressed air represents a source of considerable potential energy and, as with electricity, precautions must be taken to prevent accidents.

Compressed air should never impinge upon the body. Ports, pipes etc. must never be blocked by hand. Before connecting any pneumatic equipment to compressed air supply, mountings, fittings, pipework, and electrical connections should be checked for security, and all plastic protection plugs removed. No pipework alterations or removal of fittings should be attempted with air supplies connected.

Air and electrical supplies must be disconnected before any adjustment, maintenance or dismantling of machinery is started.

The maximum allowable operating pressures, temperature, loads etc. must be strictly observed. Refer to individual catalogs for this information, and any other operating or application limitations.

When fluorine rubber seals ('Viton' used on high temperature equipment) are subjected to temperatures in excess of 400°C / 750°F the Fluoroelastomer decomposes. The products of decomposition are extremely hazardous – including Hydrofluoric Acid. Following any fire, or high temperature accident, if charred or black sticky seals are found and the presence of Viton is suspected, do not touch the equipment, and contact SMC Customer Service for advice.

COMPRESSED AIR SAFETY – ACTUATORS

1. Air supply to any pneumatic actuator must be isolated and the supply lines to each cylinder port exhausted before adjusting, dismantling or dismantling.
2. Actuators, being moving parts, must be safe guarded. Consult SMC Customer Service.
3. Electrical installation of auto switches must be undertaken by a person competent to undertake electrical work.
4. The security of all mountings, attachments and air connections must be checked before commissioning or restoring the air supply after adjustment or maintenance.
5. Cushion screws on air cushioned cylinders should be adjusted with air supply isolated from the actuators, to avoid any possibility of adjusters blowing out under pressure.

AIR CYLINDER FORCE GUIDE

Cylinder Forces shown in the tables below are for both Extension and Retraction types. Lines in **bold** type show Extension Forces, using the full piston area. Lines in *italic* type show Retraction forces with various S Size Piston Rods.

Pressures along the top of the tables do not represent air supply pressure; they are differential pressures across the two cylinder parts; in practice, the air supply line must supply another 5% of pressure to make up for cylinder loss and must supply another 25% ~ 50% additional pressure to make up for flow losses in lines and valving so the cylinder will have sufficient travel speed. For pressures not shown, use the effective areas in the third column as power factors, multiply effective area times differential pressure to obtain theoretical cylinder force.

HOW TO ORDER

SERIES NCJ2 HIGH TEMPERATURE RESISTANT CYLINDER - XB6 OPTION

TECHNICAL SPECIFICATIONS

Applicable Cylinder Bore Size	ø6, ø10, ø16
Action	Double Acting (Single/Double Rod)
Ambient and Fluid Temperature	-10°C~+150°C / 14~300°F
Packing Material	Fluorocarbon Rubber
Special Grease	Teflon® based Grease
Mounting Type	Basic, Foot, Rod Side Flange

HOW TO ORDER

SERIES NCJ2 LOW TEMPERATURE RESISTANT CYLINDER - XB7 OPTION

TECHNICAL SPECIFICATIONS

Applicable Cylinder Bore Size	ø6, ø10, ø16
Action	Double Acting (Single/Double Rod)
Ambient and Fluid Temperature	-55°C~+70°C / -67~160°F
Packing Material	NBR
Special Grease	Teflon® based Grease
Mounting Type	Basic, Foot, Rod Side Flange

HOW TO ORDER

SERIES NCJ2 LOW FRICTION CYLINDER - XB9 OPTION

TECHNICAL SPECIFICATIONS

Applicable Cylinder Bore Size	ø6, ø10, ø16
Action	Double Acting (Single/Double Rod)
Ambient and Fluid Temperature	-55°C~+70°C / -67~160°F
Piston Velocity	10 ~ 50 mm/s (-4 ~ 2in/s)
Mounting Type	Basic, Axial Foot, Rod Side Flange

ALSO AVAILABLE:

- XB13 OPTION - LOW SPEED
- XC22 - VITON SEALS

AIR CYLINDER SERIES CG1 BORE SIZES Ø20~100MM

- ✓ Double acting
- ✓ Clean line
- ✓ A substantial reduction in overall length compared to tie-rod designed cylinders
- ✓ High velocity
- ✓ Magnetic piston for auto switch sensing as an option
- ✓ Non-rotate option available

TECHNICAL SPECIFICATIONS

Fluid	Air
Proof pressure	0.15MPa / 218PSI
Max operating pressure	0.99MPa / 144PSI
Min operating pressure	0.05 MPa / 7PSI
Ambient and fluid temperature	-10~60°C / 14~140°F
Piston velocity	50~700mm/sec (ø80~ø100) 2~28in/s
Thread tolerance	JIS 2 class
Stroke length tolerance	ø20~63 up to ~1000st: ⁺¹ / ₀ mm
Lubrication	None required

CONSTRUCTION SPECIFICATIONS

Rod cover	Aluminium alloy (Hard black alumite)
Body	Aluminium alloy (Hard alumite)
Piston rod	Carbon steel (hard chrome plated)

AIR CYLINDER SERIES CA1

- ✓ Auto switch sensing optional
- ✓ Bore sizes Ø40, 50, 63, 80, 100
- ✓ Non-rotating piston rod & double rod types available
- ✓ Ultra low friction, maximum 5%
- ✓ Long life, high efficiency
- ✓ Hard anodized barrel
- ✓ Locking/finelock head available (Series CLA)
- ✓ High impact resistant anodized barrel *For calculation of side loading consult your SMC Sales Office.

Construction

Spring lock-up

Lock releasing

Locking

Spring force applied tapered brake piston is enlarged by the wedge effect and even more strengthened to $\frac{AB}{AC}$ times by the effect of lever, works on the brake shoe, then turns into a large power which tightens the piston rod to lock it.
To release lock up, apply air pressure to releasing port to kill the spring force.

Air pressure lock-up

Lock releasing

Locking

Air pressure drives the brake piston.

Spring and air pressure lock-up

Lock releasing

Locking

Air pressure and spring force combine to drive brake piston.

FLOATING JOINT
COMPACT CYLINDER EXCLUSIVE
SERIES JB

- ✓ Compact for (N)CQ2 Compact Cylinders up to 100mm
- ✓ Absorbs both Angular and Eccentric Misalignment
- ✓ Reduces Mounting Time of Actuator
- ✓ Long Life - Dust-tight Cover
- ✓ Do not use for Rotation because of Non-Rotating Shaft Coupling

DUAL ROD CYLINDER SERIES CXS SINGLE ROD TYPE

- ✓ Bore Sizes Ø6, Ø10, Ø15, Ø20, Ø25, Ø32
- ✓ A Slim Compact Dual Rod Cylinder with high precision non-rotating accuracy.
- ✓ Slide or Ball Bush Bearing Option
- ✓ Auto Switches housed in cylinder body
- ✓ Adjustable Stroke (on Retract Position Only (0~5mm))
- ✓ 4 Alternative Mounting Positions
- ✓ 2 Porting Locations
- ✓ Through Hole Mounting

SELECTOR

Either the housing or the plate can be fixed depending upon the application.
Note: on the B type mounting (see "How to Order"), the air supply is connected to the housing which is static. On the P type mounting, the air supply is connected to either end plate with the opposite end plugged.

AUTO SWITCH MOUNTING BRACKET
CYLINDER SERIES C95

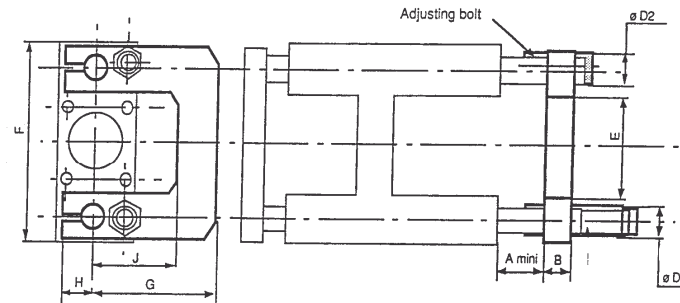

An auto switch mounting bracket will be added on the tie rod mount part to keep the accessibility of the screw to adjust the auto switch position.

PRECAUTIONS:

Minimum cylinder stroke
Cylinders ø32 up to ø63 Minimum stroke: 25mm
Cylinders ø80, ø100 Minimum stroke: 50mm

Stroke adjusting unit

A minimum length will have to be added on for stroke adjusting unit.

- Use a contact protective box (P14) for the following cases with D-C7•C8 type. (Connection to inductive load, lead wire of 5m or more and when using 100VAC.)
- Lead wire length: 0.5 (standard), 3m (option).
- For D-B59W, the indicator lamp is a two colour indication system with a red light inside the sensitive region and a green light at the optimum position.

CUSHION CAPACITY SPECIFICATIONS

Calculation of absorption energy of stroke adjusting unit with shock absorber

Collision Types	Horizontal collision	Vertical collision (downward)	Vertical collision (upwards)
Kinetic energy E_1	$\frac{1}{2} MV^2$		
Thrust energy E_2	$F \cdot s$	$F \cdot s + Mgs$	$F \cdot s - Mgs$
Absorption energy E_3	$E_1 + E_2$		

g: Gravitational acceleration = 9.81 m/s²

v: Speed of colliding object (m/s)

M: Weight of colliding object (kg)

F: Cylinder thrust (N)

s: Shock absorber stroke (m)

The speed of the colliding object is measured in the moment of impact with the shock absorber. (Note) The absorption capacity of each unit shown here is given for the mounted shock absorber when used at full stroke. When the effective stroke of the absorber decreases as a result of stroke adjustment, the absorption capacity decreases dramatically. Therefore, when the shock absorber is close to the allowable energy limit, the shock absorbers stroke should be adjusted for maximum travel.

Calculation of absorption energy of stroke adjusting unit with shock absorber

Collision Types	Horizontal collision	Vertical collision (downward)	Vertical collision (upwards)
Kinetic energy E ₁	$\frac{1}{2} MV^2$		
Thrust energy E ₂	F*s	F*s+Mgs	F*s-Mgs
Absorption energy E ₃	E ₁ +E ₂		

g: Gravitational acceleration =9.81m/s²
v: Speed of colliding object (m/s)
M: Weight of colliding object (kg)
F: Cylinder thrust (N)
s: Shock absorber stroke (m)

The speed of the colliding object is measured in the moment of impact with the shock absorber.
(Note) The absorption capacity of each unit shown here is given for the mounted shock absorber when used at full stroke. When the effective stroke of the absorber decreases as a result of stroke adjustment, the absorption capacity decreases dramatically. Therefore, when the shock absorber is close to the allowable energy limit, the shock absorbers stroke should be adjusted for maximum travel.

Calculation of absorption energy of stroke adjusting unit with shock absorber

Collision Types	Horizontal collision	Vertical collision (downward)	Vertical collision (upwards)
Kinetic energy E_1	$\frac{1}{2} MV^2$		
Thrust energy E_2	$F \cdot s$	$F \cdot s + Mgs$	$F \cdot s - Mgs$
Absorption energy E_3	$E_1 + E_2$		

g: Gravitational acceleration = 9.81 m/s²

v: Speed of colliding object (m/s)

M: Weight of colliding object (kg)

F: Cylinder thrust (N)

s: Shock absorber stroke (m)

The speed of the colliding object is measured in the moment of impact with the shock absorber.

(Note) The absorption capacity of each unit shown here is given for the mounted shock absorber when used at full stroke. When the effective stroke of the absorber decreases as a result of stroke adjustment, the absorption capacity decreases dramatically. Therefore, when the shock absorber is close to the allowable energy limit, the shock absorbers stroke should be adjusted for maximum travel.

In case of Long Stroke

For long stroke operation, the cylinder tube may be deflected depending on weight and load; in that case, support the center on the cylinder with a side support so that the supporting interval will be lower than the value shown in the diagram.

CUSHION CAPACITY SPECIFICATIONS

Calculation of Absorption Energy of Stroke Adjusting Unit with Shock Absorber

Collision Types	Horizontal Collision	Vertical Collision (downward)	Vertical Collision (upwards)
			
Kinetic Energy E_1	$\frac{1}{2} MV^2$		
Thrust Energy E_2	$F \cdot s$	$F \cdot s + Mgs$	$F \cdot s - Mgs$
Absorption Energy E_3	$E_1 + E_2$		

g: Gravitational Acceleration = 9.81 m/s²

v: Speed of Colliding Object (m/s)

M: Weight of Colliding Object (kg)

F: Cylinder Thrust (N)

s: Shock Absorber Stroke (m)

The speed of the colliding object is measured in the moment of impact with the shock absorber.

(Note) The absorption capacity of each unit shown here is given for the mounted shock absorber when used at full stroke. When the effective stroke of the absorber decreases as a result of stroke adjustment, the absorption capacity decreases dramatically. Therefore, when the shock absorber is close to the allowable energy limit, the shock absorbers stroke should be adjusted for maximum travel.

In case of Long Stroke

For long stroke operation, the cylinder tube may be deflected depending on weight and load; in that case, support the center on the cylinder with a side support so that the supporting interval will be lower than the value shown in the diagram.

IN CASE OF LONG STROKE

For long stroke operation, the cylinder tube may be deflected accordingly to the dead weight and load. In that case, support the medium position with a side support so that the supporting interval (l) will be lower than the value shown in the diagram.

Note): If the cylinder tube mounting accuracy is not good enough, the side support may cause poor operation. Level the cylinder tube before mounting.

Unsupported span length not to exceed lengths shown by graph.

SERIES MXS BORE SIZES Ø6, 8, 12, 16, 20, 25MM INTEGRATED SLIDE TABLE AND DUAL ROD PNEUMATIC CYLINDER

- ✓ Cross Roller Bearing Guides
- ✓ Adjustable Stroke Option
- ✓ Endlock can be specified
- ✓ End of Stroke Buffer available
- ✓ Six Body Sizes released
- ✓ Base, Through Body and End Face Mounting possible
- ✓ Auto Switch capable as standard
- ✓ Location Dowel Holes in Worktable

MXS25	10,20,30,40,50,75,100,125,150

Note 1): Endlock

Mounted onto the rear face of the cylinder, this automatically operating lock engages when the MXS is in the retracted position to prevent the load from moving in the event of air failure or machine shutdown. Usually used when the MXS is mounted vertically with a suspended load.

Note 2): Axial Piping

Allows piping through the rear face of the MXS (opposite the piston rod) instead of the body side adjacent to the piston.

Note 3): End of stroke buffer.

Spring loaded workpiece mounting plate for obstacle detection and protection of workpiece. An autoswitch can be mounted to indicate operation of the buffer, operated by a magnet on the piston. By reversing the direction of the switch, NO or NC operation is achievable.

FORMULA FOR CALCULATION OF

ALLOWABLE STATIC LOAD, Fp, Fy, AND Fr

When pitch moment is applied

$$F_p = \frac{M_1 \times 1000}{L_p + C_p} \text{ (N)}$$

Lp: Distance between body and load point (mm)
Cp: Correction value for moment center distance (mm)

When yaw moment is applied

$$F_y = \frac{M_2 \times 1000}{L_y + C_y} \text{ (N)}$$

Ly: Distance between body and load point (mm)
Cy: Correction value for moment center distance (mm)

When roll moment is applied

$$F_r = \frac{M_3 \times 1000}{L_r + C_r} \text{ (N)}$$

Lr: Distance between body and load point (mm)
Cr: Correction value for moment center distance (mm)

★ Portable weight should be 1/10 or less of the allowable static load in consideration of the overhang or inertia.

Note) For further information on allowable loadings for the MXS series, please contact your local SMC Sales Office.

PRECAUTIONS FOR MAKING AND MOUNTING ARMS

• WHEN ARMS ARE TO BE MADE SEPARATELY, THEIR LENGTH AND WEIGHT SHOULD BE WITHIN THE FOLLOWING RANGE.

• TO ATTACH AND DETACH THE ARM TO AND FROM THE PISTON ROD, FIX THE ARM WITH A WRENCH OR VISE AND THEN TIGHTEN THE BOLT. (EXCESSIVE FORCE IN THE DIRECTION OF ROTATION APPLIED TO THE PISTON ROD MAY DAMAGE THE INTERNAL MECHANISM.)

REFER TO THE FOLLOWING TABLE FOR TIGHTENING TORQUE FOR MOUNTING.

COMPACT ROTARY TABLE RACK AND PINION TYPE SERIES MSQ BORE SIZES: 10, 20, 30, 50, 70, 100, 200

- ✓ Operating Range of table is 0~190° by Angle Adjusting Screw
- ✓ Double Rack and Single Pinion Construction eliminates backlash
- ✓ Hollow Shaft Standard for Wiring and Piping
- ✓ Smooth Rotary Motion

Loosen the retaining screw and shift the switch and set it at any position to suit your need. Then re-tighten the retaining screw. However, excessive tightening can cause damage to the screw, and result in problems. Be sure to use about 0.5N m tightening torque.

Holding Position

- The work holding point should be within the range shown in accordance with the operating pressure in the "Effective Holding Force" graphs.
- When the work holding point is out of the limit range, an excessive unbalanced load is applied to fingers and guides, causing excessive play of fingers and exercising an adverse effect on the life.

MOUNTING
CONFIGURATIONS

THE TOGGLE MECHANISM HOLDS THE COMPONENT EVEN WHEN THE PRESSURE DROPS

When fingers are closing, the toggle mechanism is actuated to produce strong and stable holding force. The component can be held even when the pressure drops.

SHOCK ABSORBER SERIES NRB

- ✓ Automatic adjustment to the most appropriate absorption performance
- ✓ High resistance to load deviation
- ✓ Double seal enclosure
- ✓ Compact design

PRECAUTION

1. Load should always be aligned with the axis of piston rod. (In the case of allowable eccentricity of 3° and more, please contact your SMC regional centre.

2. Adjustment of the stopper nut (to adjust the length a) will control the suspension time of the impacting object.

Adjustment of the stopper nut (to adjust the length a) will control the suspension time of the impacting object.

PRECAUTIONS

Load should always be aligned with the axis of piston rod.

Allowable eccentricity $\theta 1 \leq 5^\circ$

For rotation impact, load should always be aligned perpendicular to the axis of shock absorber and allowable rotation angle at stroke end should always be $\alpha 2 < 5^\circ$.

Installation conditions for rotation impact (mm)

Model	S (Stroke)	$\alpha 2$ (Allowable Rotation Angle)	R (Min Installation Angle)
RBQ•1604	4	5°	51
RBQ•2007	7	5°	89
RBQ•2508	8	5°	102
RBQ•3009	8.5	5°	108
RBQ•3213	13	5°	166

The shock absorber shall not be used under conditions where it will be exposed to cutting oil, water and other types of fluid, otherwise malfunction may result.

Z VALVE SERIES OVERVIEW

Z Valve Family

Innovative

Cost effective

Versatile

SMC Pneumatics has again confirmed its technological leadership in the world pneumatics market with the release of the Z valve series.

The result of a major research and development program is a family of three valve ranges whose generic name 'Z' is literally translated as infinity or ultimate.

The Z valve family comprises of three associated yet different product series, VQ, SX and SY, which provide cost effective solutions to pneumatic problems through the extensive range of valve and manifold configurations that are available.

The new Z valves give you major advances in solenoid pilot valve technology, spool design and manifold features that allow benefits in extended life cycle, high flow and low power consumption.

All three series, VQ, SX and SY, are compact, lightweight and aesthetic in appearance. They offer particular strengths for different requirements but have a commonality of major features and benefits across the range to give you maximum versatility, performance and reliability in your quest for competitive advantage.

Both the SX and SY series offer a wide range of conventional body ported and subbase mounted valves.

These valves feature the latest guided spool with slimline water resistant seals which protect it against airline condensate carryover. This, together with the low power consumption, high speed solenoid pilot operator, allows a minimum life cycle in excess of fifty million.

In the case of the SX series, a further space saving is achieved by locating both solenoid operators at one end of the valve.

Aluminum bar manifolds, featuring either threaded ports or integrated push-in connectors, together with modular stacking manifolds, allow the valves to be mounted conveniently in the required layout. Also available is a pre-wired, plug-in modular manifold which can be ordered for use on a DIN rail system.

The VQ series incorporates matched lapped and ground stainless steel spool and sleeve design with the new solenoid pilot operator to provide you with high speed operation and a minimum expected life cycle in excess of two hundred million.

Further to the body ported, subbase mounted and modular stacking manifold types, the VQ series also offers two new and innovative multiple valve variants, the flip and cassette types.

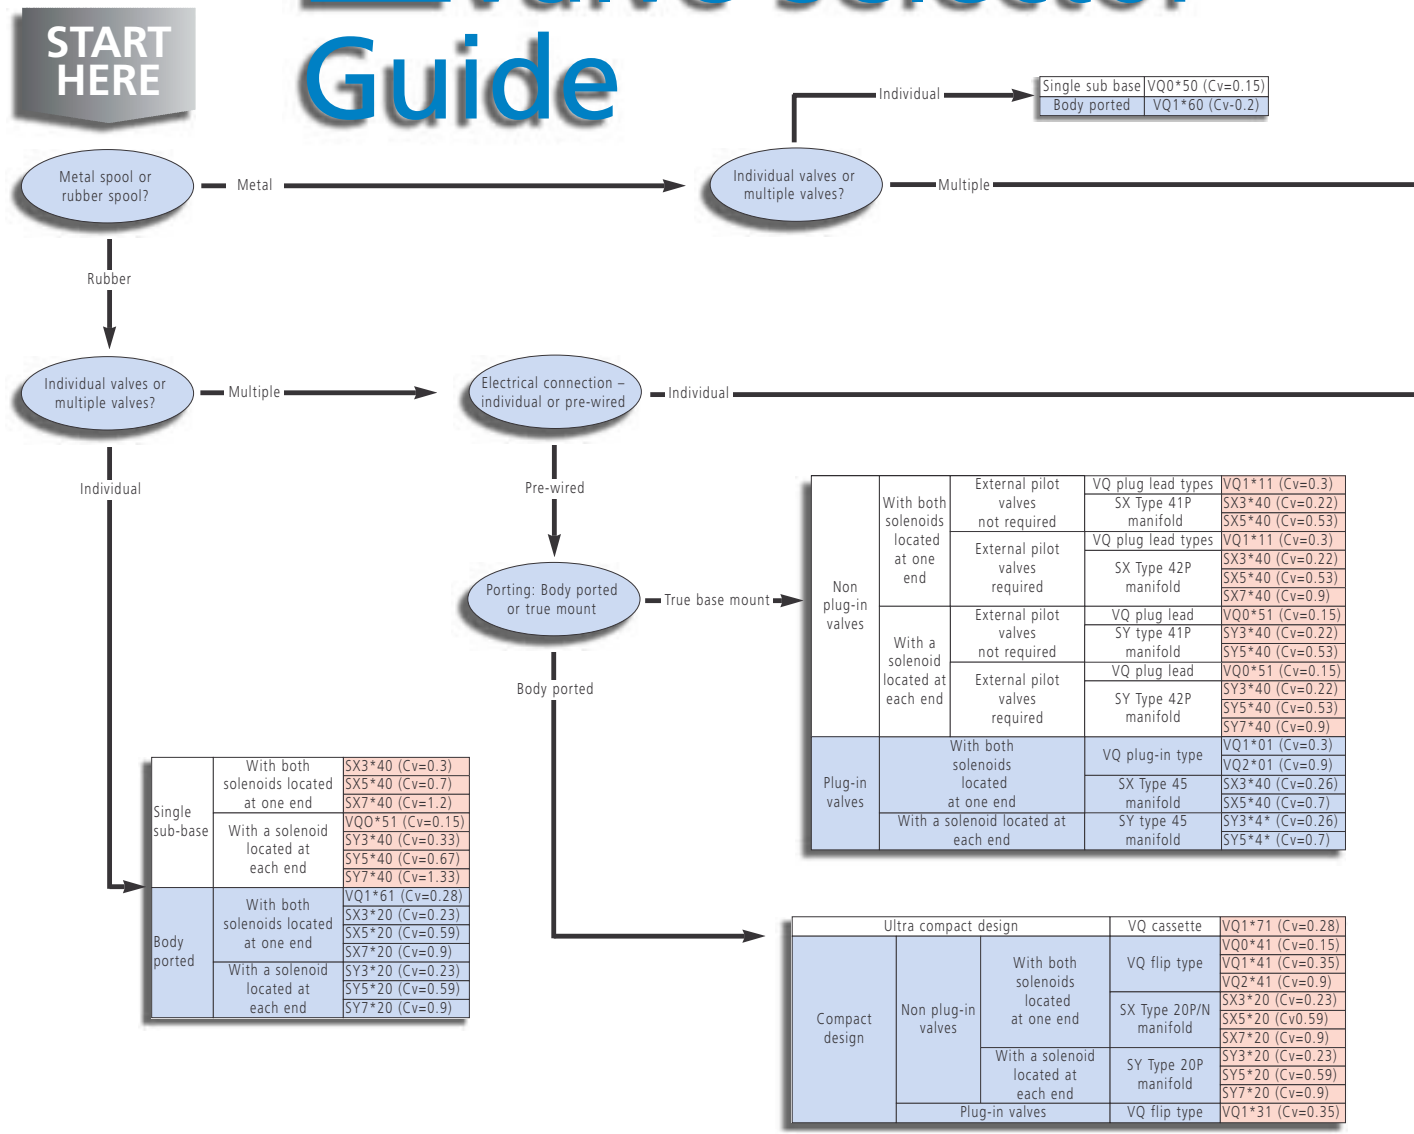

The flip type integrates both the valve and base in a super compact arrangement which still allows ease of interchangeability. The cassette type allows modular slices to be clipped onto a DIN rail for another flexible and compact manifold assembly.

The provision of the solenoid electrics in either negative common or positive common will allow compatibility with any chosen control device.

In addition to the above features, the new SMC Z family of valves allows you to select from a comprehensive range of mounting brackets, electrical connectors, port adapters, manifold accessories and serial transmission devices to provide the complete solution for your application.

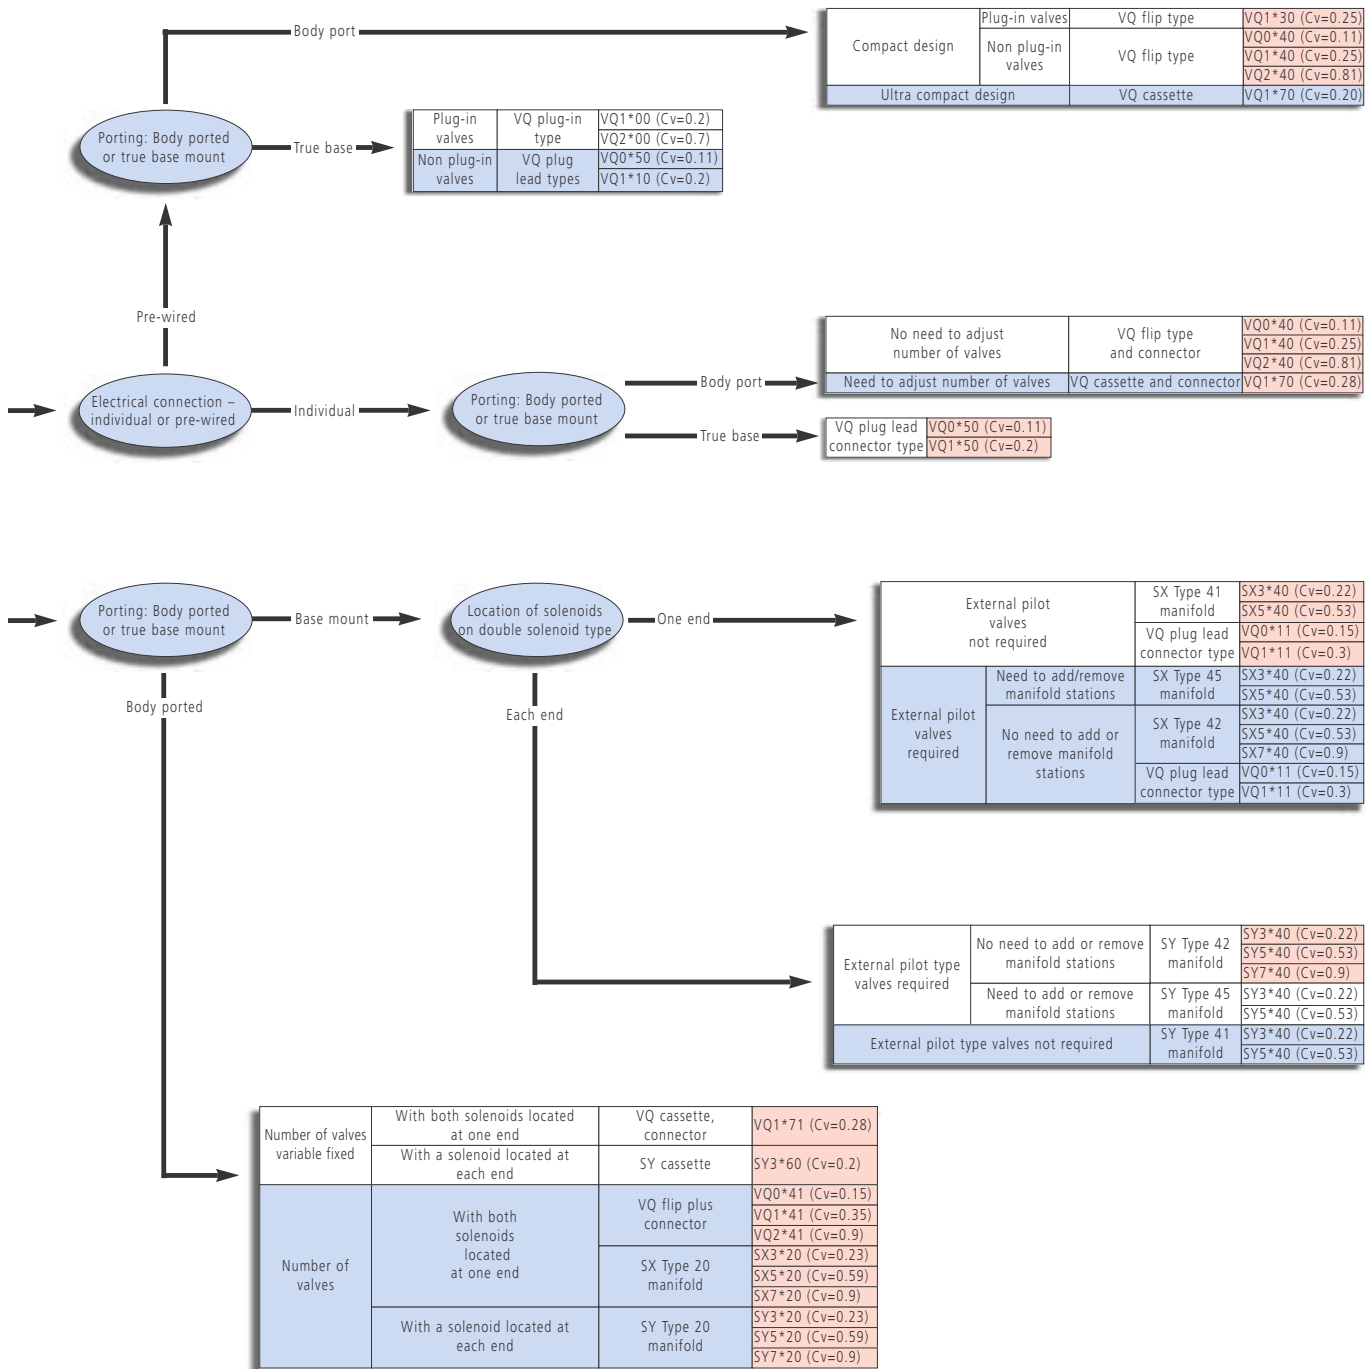

Should you require the assistance of SMC staff for any reason concerning the use and application of the Z family, please contact your local SMC Sales Office.

Z Valve Selector Guide

How To Use This Guide

START in the top left hand corner of the page and make your first decision – metal spool or rubber spool?
Follow your decision line until you come to another choice. ie. individual or multiple valves.
Keep following your decision line until you arrive at a table. Starting at the left of the table, make your first of two possible choices. Follow your choice one column to the right, and make your next decision.
Remember, at each stage across the table you may only select one of the options immediately to the right of the current box. Do not deviate up or down. Eventually you will arrive at a selection in the right hand column (shaded pink). Now choose the valve with your required Cv.

- ✓ When a valve type has been selected, please consult the relevant catalog page in the following section, or your local SMC Sales Office for how to order information and details of stocked products.
- ✓ If you require further assistance or explanation with this guide, please contact your local SMC Sales Office.
- ✓ This guide does not cover "made to order" options and variants e.g. SY body ported external pilot types. Further information is available from catalogs E135-A (SY), E131-B (VQ), E139-A (SX) or your local SMC Sales Office.
- ✓ The VQ flip type valves offer only two position versions – three position bodies are not available.
- ✓ A true sub-base mount valve is defined as: "The valve body can be removed from the manifold without disturbing any pneumatic piping" i.e. all pneumatic connections are made to the manifold, not the valve.

SERIES SX3000, 5000 SOLENOID VALVE

- ✓ Sizes Available SX3000 and SX5000
- ✓ Compact and Lightweight Design
- ✓ Low Power Consumption: 0.6W
- ✓ Large Flow Capacity
- ✓ Long Life exceeding 50 million cycles

5 PORT METAL SEAL/RUBBER SEAL ULTRA HIGH SPEED SOLENOID VALVE SERIES VQ0000

- ✔ High Speed Response from new Solenoid Design.
- ✔ Long Life: Over 200 Million Cycles can be achieved with the Special Plunger and Poppet Valve Construction of the Patent Pilot Valve.
- ✔ Space Saving Design
- ✔ Four Options for Electrical Connection.
- ✔ Indicator light and Voltage Surge Suppressor
- ✔ Ease of Assembly and Maintenance.
- ✔ Optimum performance from Metal Seal Valves is achieved when used with a Mist Separator.

T KIT (TERMINAL BLOCK BOARD) SERIES VQ1000

- ✓ This Kit has a small Terminal Block inside a junction box. The Electrical Entry Port G (PF) 1/2 permits connection of Conduit Fittings.
- ✓ Max 12 Stations.

Open the terminal block cover for wire connection.

Sequence 1. How to remove terminal block cover

Loosen the screws on the terminal block cover and open it in the direction shown by the arrow. The cover can then be removed from the terminal block.

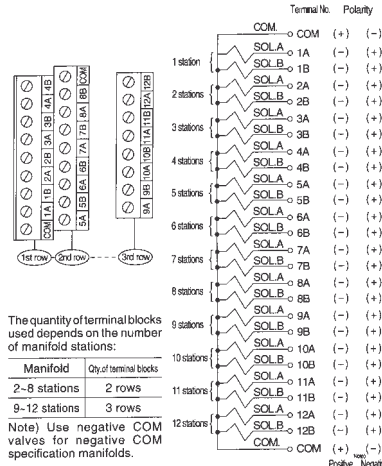

Sequence 2. Wire connection

The diagram on the right shows the terminal block wiring schematic. All stations are provided with double solenoid wiring. Insert each lead wire into the terminal opening and tighten the screw directly above.

Sequence 3. How to replace terminal block cover

Hook groove "b" on shaft "a" and close the cover. Then tighten the screws.

5/2, 5/3 SPOOL & SLEEVE, ULTRA HIGH SPEED SOLENOID VALVE SERIES VQ1000

- ✓ Choice of Five Supported Protocols
- ✓ 512 Points through 32 Transmission Terminals
- ✓ 100m Minimum Transmission Distance
- ✓ Communication Speeds up to 500K Baud - Protocol Dependent
- ✓ "Plug In" System: easy assembly and maintenance
- ✓ High Speed Response from new Solenoid Design
- ✓ Long Life: Over 200 million cycles can be achieved by means of a special plunger and poppet valve construction within the pilot valve (patented)
- ✓ Space Saving Design
- ✓ Electrical Connection by D Sub Connector
- ✓ Indicator Light (2 Color on Double Solenoid Valve)
- ✓ Interface Integral with Manifold
- ✓ The VQ Valve incorporates a 2 Stage Armature allowing the valve to open before the armature completes its stroke

^(Note 1) Calculated on the basis of JIS B 8375-1981 (Supply pressure 0.5MPa{5.1 Bar}); the above valve shows response time checked when the valve is equipped with an indicator light and surge voltage suppressor).

^(Note 2) Use dry air to prevent dew condensation in the case when temperature is low.

^(Note 3) Perfect dry air (dew point equals to -30°C). Non grease on main valve. Mist separation required.

Note: The VQ valves used with Serial Transmission Manifolds must be positive common type which differs from valves used on 'D' Sub-connector manifolds.

Note: Valves and Manifold to be ordered as separate items.

Note: Switch Identification and setting information is attached to the SI Interface. The terminal abbreviation "FG" means Frame Ground - ie chassis earth.

Example: A seven station manifold, complete with Omron Sysmac series including with Diameter 4 one touch fittings and DIN rail mount, with 5 off single solenoid valves and 2 off double solenoid valves is ordered as follows :

VV5Q11-07C45C-D 1 off

THE Q SEAL

AS PART OF A LONG TERM DEVELOPMENT PROGRAM TO IMPROVE THE PERFORMANCE AND DURABILITY OF PNEUMATIC VALVE SEALS, SMC HAS DEVELOPED A NEW TYPE OF SEAL WHICH OVERCOMES THE PROBLEMS INHERENT WITH TRADITIONAL O-RINGS AND BONDED SEALS - CALLED Q SEAL, IT FEATURES A SPECIAL PROFILE WHICH REDUCES SLIDING RESISTANCE TO A MINIMUM, ENHANCES BOTH LONG TERM RELIABILITY AND AIR FLOW CHARACTERISTICS AND PROVIDES BI-DIRECTIONAL PORT ACCESS.

EXH gallery block disc

When valve exhaust affects the other stations on the circuit or when externally piloted, dual pressure valve is used on a standard manifold, insert EXH block disc(s) in between stations to isolate valve exhaust.

Body type	Plug-in type
Part No.	AXT625-12A

Interface speed control

Needle valve on the manifold block can control cylinder speed by throttling exhaust.

Body type	Plug-in type
Part No.	NVFS2000-20A-1 NVFS2000-20A-2

Interface regulator

Spacer type regulator on manifold block controls supply pressure to the valve. With standard gauge.

Body type	Plug-in type
Pressure Regulation P	NARBF2000-00-P-1

Air Shutoff valve spacer

The concurrent use of air shutoff valve spacer with NVFS2100 controls supply of air pressure to the manifold (3-way dump valve). Specify location in **first (L)** or **last (R)** station of manifold.

Body type	Plug-in type
Part No.	NVFS2000-24A-1 L R

Note) L: U side mount R: D side mount

Double Check "Perfect" spacer

The concurrent use of perfect spacer with built-in double check valve can stop the cylinder at mid-position and hold for extended time without being affected by the air leakage across spool seals.

Body type	Plug-in type
Part No.	NVFS2000-22A-1

Blank plate

When disassembling valve for maintenance purposes or when spare manifold stations are required, install Blank plate on the manifold block.

Body type	Plug-in type
Part No.	VVFS2000-10A

COMPACT BODY TYPE WITH BUILT-IN SPEED CONTROLLER - FOR VQZ2000 ONLY

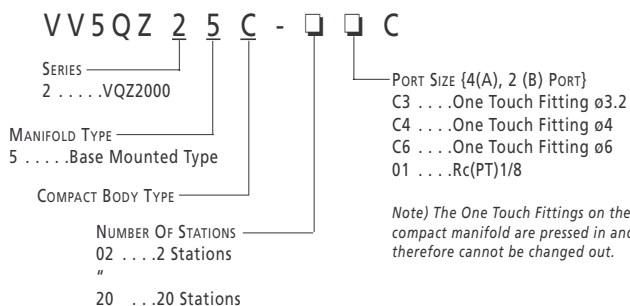

- Speed Controllers are built into the valve body (Rubber Seal Models only), making it easier to adjust cylinder speed.
- Needle valve is equipped with a mechanism to prevent it from being pulled out.

Note) Compact body type valves and standard valves are not interchangeable. Compact valves cannot be mounted on a standard manifolds and vice versa.

TUBE RELEASING TOOL TG-1, TG-2

- ✔ Switchable for all manifolds with integral $\varnothing 4\text{mm}$ and 6mm One-touch fittings (TG-1) or $\varnothing 1/8"$ and $1/4"$ One-touch fittings (TG-2)
- ✔ Easy change between 4mm and 6mm tube size fittings or $1/8"$ and $1/4"$ tube size fittings
- ✔ Simplifies removal of tubing by simultaneously depressing collet and gripping tube
- ✔ Can be used one handed in confined spaces

TG-1 Tube Releasing Tool
Available in Blue
For 4mm and 6mm Tube Size Fittings

TG-2 Tube Releasing Tool
Available in Red
For $1/8"$ and $1/4"$ Tube Size Fittings

USAGE

Operation

- ① Insert the tool straight along the tube in the fittings mounting direction until the leading end of the tool reaches the leading end of the release bush.

Size change

Push and turn the nose of the tool in the directions of arrows simultaneously to release it from the fixed state. Turn the nose by 180° and fix it. The applicable tube size is shown on the back side.

- ② After inserting the tool into the leading end of the release bush, firmly grip the handle of the tool and push it in until the tube holding section strikes against the stroke end.

[Note: Insufficient insertion may not release tubing.]

- ③ After inserting the tube holding section up to the stroke end, release the force. The returning force of the spring releases the tube held with the tool.

AS PART OF A LONG TERM DEVELOPMENT PROGRAM TO IMPROVE THE PERFORMANCE AND DURABILITY OF PNEUMATIC VALVE SEALS, SMC HAS DEVELOPED A NEW TYPE OF SEAL WHICH OVERCOMES THE PROBLEMS INHERENT WITH TRADITIONAL O-RINGS AND BONDED SEALS - CALLED Q SEAL, IT FEATURES A SPECIAL PROFILE WHICH REDUCES SLIDING RESISTANCE TO A MINIMUM, ENHANCES BOTH LONG TERM RELIABILITY AND AIR FLOW CHARACTERISTICS AND PROVIDES BI-DIRECTIONAL PORT ACCESS.

SIZING OF TUBING SYSTEMS

SIZING OF TUBING SYSTEMS

The calculation of the valve system flow factor (Cv) is required for each application. The tube and fittings between air source and the application are part of this system as each length of pipe and each fitting has a pressure drop.

Each SMC element can be individually defined in terms of effective orifice.

The overall Cv of a tube and valve system is calculated by combining the Cv of each element as follows:

$$\frac{1}{Cv_{syst}^2} = \frac{1}{Cv_1^2} + \frac{1}{Cv_2^2} + \frac{1}{Cv_3^2} \text{ etc}$$

Quick approximate calculation can be made by assuming 50% of system pressure drop is made at the valve and 50% in the tube system.

If our calculated Cv for the system including valve and fittings is Cv_{syst} , then:

$$\begin{aligned} \text{required Cv for valve} &= Cv_{syst} \times \sqrt{2} \\ \text{for fittings and tube} &= Cv_{syst} \times \sqrt{2} \end{aligned}$$

If tube system has 3 meters of nylon pipe and 6 KQ fittings we can consider this as 9 (3 + 6) elements so Cv for each fitting element needs to be:

$$Cv_{syst} \times \sqrt{2} \times \sqrt{9}$$

 9 elements assumed all equal ΔP
 (assumption 50% ΔP valves 50% ΔP tube etc)

The SMC fittings are quoted with effective orifice of S in mm². (18mm² ≈ Cv1)

Thus if system Cv required was 0.6

valve to be used has a Cv of 0.85

each fitting system element used will have a Cv of $0.6 \times \sqrt{2} \times \sqrt{9} = 2.55$

$Cv2.55 \equiv 46\text{mm}^2$

From this catalog, SMC fitting KQH10-U01 has $S > 46\text{mm}^2$ ∴ use tube system Ø10mm

MINIATURE FITTINGS: M3, M5, 1/8

- ✓ Compact and Space-Saving
- ✓ Tube has a large retaining force
- ✓ Hose Nipple ensures easy removal
- ✓ Accepts Nylon Tubes, Soft Nylon Tube and Polyurethane

SERIES KQ2 ONE TOUCH FITTINGS

FITTINGS WITH UNI-THREAD

SERIES KQ: BLACK BODY FITTINGS
SERIES KQ2: WHITE BODY FITTINGS

- ✓ Wide Range of Pressures low vacuum to 0.1MPa
- ✓ Wide Range of Applicable Tube Systems (4mm to 16mm)
- ✓ Minimized Resistance to Air Flow
- ✓ Easy and quick installation of tube
- ✓ A unique thread concept allows for compatibility with parallel and taper female threads. Uni-thread fits all female thread types* (Rc, Rp, G, NPT, NPTF, BSP, BSPT)
- ✓ No Thread Sealant required
- ✓ Space-Saving
- ✓ Uniform Mounting Height improves appearance
- ✓ Cuts assembly time by over 60%

SERIES KQ: BLACK BODY FITTINGS
AVAILABLE IN CANADA
SERIES KQ2: WHITE BODY FITTINGS
AVAILABLE IN THE USA

- ✓ Constant mounting height saves space
- Lower height of screwed-in fittings save space and improves appearance

Uni-Threads

Conventional Threads

- ✓ Screw-In Time is reduced to 1/3

Existing Tapered Thread Series: 2 to 3 turns with a wrench after manual tightening
Uni-Thread Series: 1/4 to 1/2 turn with a wrench after manual tightening

Thread Type	Manual Tightening Time + Tool Tightening Time	Total	Ratio
Uni-Thread	6 sec + 4 sec	10 sec	1/3
Conventional Thread	4 sec + 26 sec	30 sec	1

UNITHREAD CONSTRUCTION

UNI THREAD RIDGE SHAPE

A new ridge shape has been created as a Uni-Thread for common application to Rc(PT), G(PF), NPT, and NPTF female threads with different thread diameters, pitches, tapered angles, ridge shapes, etc..

GASKET CONSTRUCTION

A gasket made of stainless sheet covered with laminated NBR on both sides is seated on the chamfer of a female thread to materialize a perfect sealing construction irrespective of the difference in thread diameters due to the difference in the types of female threads, variation in tolerance, difference in the size of chamfer.

(It is applicable to any female thread with ordinary chamfer.)

ONE TOUCH FITTINGS: EXTENDED RANGE

- ✓ Extensive range of esoteric designs for yet more applications
- ✓ SMC design gives high flow for given tube size
- ✓ Fittings from 10 Torr (vacuum) to 10 bar

- ✓ One-touch collet design allows easy dis-assembly with strong tube gripping
- ✓ Wide range of threads: M5 (gasket type) to taper (R $\frac{1}{2}$)
- ✓ Large range of tube sizes from Ø4mm to Ø16mm
- ✓ Threads come with applied sealant (no tape required)

ROTARY ONE TOUCH FITTINGS SERIES KS/KX

- ✔ Ball Race Bearing for oscillating or rotating applications
- ✔ KX Series fitted with double ball race bearing for high speed applications
- ✔ Tube Sizes 4, 6, 8, 10, 12mm
- ✔ Low torque, low friction rotation
- ✔ Thread options: M5, R $\frac{1}{8}$ ~ R $\frac{1}{2}$ and Uni $\frac{1}{8}$ ~ Uni $\frac{1}{2}$
- ✔ One Touch Collet includes anti tube rotation mechanism
- ✔ Suitable for copper free
- ✔ Pressure or Vacuum Applications

HOW TO
CREATE
MIXED TUBE SIZE UNITS WITH KDM PARTS

1 Loosen the cross-recessed head machine screw using a Phillips type screwdriver to remove the plate from the case.

2 After exchanging connectors in desired places, fix the plate with a Phillips type screwdriver to the case.

RECTANGULAR MULTI-CONNECTOR

HOW TO USE

Separation

Loosen the clamp bolt to separate the plug side from the socket side.

Connection

Put together the irregular faces for engagement and connect the plug case to the socket. After tightening the clamp bolt by hand, tighten it further with hexagon bar wrench (nominal width across flats:4).

Panel Mounting

1 Loosen (4) screws for bracket on the socket side using a Phillips type screwdriver (JIS nominal No 2) until the bracket touches the stop ring.

2 Shift the panel mounting bracket to the inside (move the screw for bracket in the longitudinal direction of the slot) and put the connector in the panel mounting hole. (Panel mounting hole: See dimensions).

3 After shifting the bolt for bracket to the outside, tighten the bolt with a Phillips type screwdriver to fix the socket case.

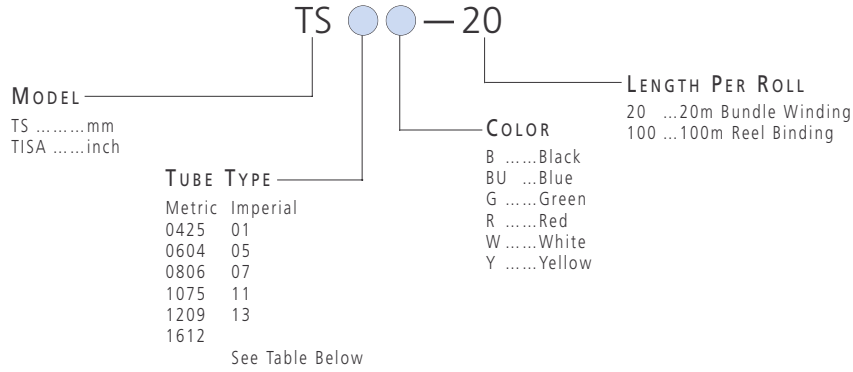

4 Loosen the screw for bracket until the bracket touches the stop ring and shift the bracket to the inside to remove the connector from the panel.

1. Polycarbonate Bowls can be attacked by a wide variety of chemicals (see List below for examples). These cause embrittlement and subsequent brittle failure, or softening. Metal Bowls should be specified for use in the presence of aggressive chemicals.
2. It is strongly recommended that metal bowl guards are specified to provide additional protection from mechanical damage to polycarbonate bowls.
3. Before air treatment units are commissioned, and after any adjustment or maintenance has been carried out, the following points should be checked before connection to air supplies.
 - All fittings and spacers are finally attached
 - All removable bowls are securely screwed/latched into position
4. Polycarbonate bowls should be regularly inspected.

Some of the Materials that will Attack Polycarbonate Plastic Bowls		
Acetaldehyde	Cresol	Milk of lime (CaOH)
Acetic acid	Cyclohexanol	Nitric acid
Acetone	Cyclohexanone	Nitrobenzene
Acrylonitrile	Cyclohexene	Nitrocellulose lacquer
Caustic soda solution	Methanol	Perchloroethylene and others
Ammonia	Dimethyl formamide	Phenol
Ammonium fluoride	Dioxane	Phosphorous Hydroxychloride
Ammonium hydroxide	Ethane tetrachloride	Phosphorous Trichloride
Ammonium sulphide	Ethyl acetate	Propionic acid
Antifreeze	Ethyl ether	Pyridine
Benzene	Ethylamine	Sodium hydroxide
Benzoic acid	Ethlene chlorohydrin	Sodium sulphide

DIMENSIONS EXAMPLE OF NAC3000 + SOFT START-UP VALVE

1. This valve cannot prevent cylinders shooting out when a closed-center solenoid valve is used, or equipment driving with a load factor of 50% or more.
2. When a regulator is to be mounted on the secondary side, use a check valve regulator (NAR**60). Standard regulators (NAR2000, 3000, 4000) do not allow large volume back-flow.
3. Mount a lubricator, as necessary, on the primary side (P port side) of the valve. When the lubricator is mounted on the secondary side (A port side), oil back-flows and is exhausted from port R.

MODULAR TYPE – ACCESSORIES

 PRESSURE SWITCH:
SERIES IS1000

- ✓ Reed Switch Type Design
- ✓ Compact
- ✓ Pressure setting made easy by Scale Plate
- ✓ Type M Sandwiches between Air Preparation Units: Type E acts as an End Connector

NOTE

The pressure switches can be mounted on both IN and OUT sides on (N)AF, (N)AR, (N)AFM, and (N)AFD units but cannot be mounted in this way on (N)AW units when the handle of an (N)AR Series Regulator faces upwards.

The switches shown DO NOT come with Yoke Clips attached.

SHUT OFF VALVE SERIES (N)VHS (3 PORT RELIEVING)

- ✓ Relieves the Downstream Pressure for System Servicing
- ✓ Visual Position Indication

SMC Pneumatics' Series NVHS 3 Port Valves provide a means to prevent accidental start-ups while personnel are cleaning or servicing equipment. When in the exhaust position, the valve may be padlock-secured.

To eliminate any uncertainty of valve status, a window displays when the valve is in supply or exhaust position.

* Simple user modification allows lock in pressure supply position.

Lockable Unit. Color may not be available as shown. Please consult SMC Customer Service.

These graphs illustrate the time required to increase pressure in a closed tank e.g. (V)BA 1. If we wish to increase tank pressure to 8 bar, where P₁ = 4 bar and tank pressure = 6.4 bar:

$$\text{initial } \frac{p_2}{p_1} = \frac{6.4}{4} = 1.6 \text{ (charging line from graph = 15 seconds)}$$

$$\text{final } \frac{p_2}{p_1} = \frac{8}{4} = 2 \text{ (charging line from graph = 65 seconds)}$$

Time taken to increase pressure = 65 – 15 seconds
= 50 seconds per 10 litre volume of tank

VACUUM SOLENOID VALVE REFERRAL

This section is written to assist the selection of solenoid valves for use in vacuum applications.

BACKGROUND

Many current pneumatic "solenoid" valves are actually of solenoid-pilot construction. The solenoid does not operate directly upon the spool or poppet within the valve. What the solenoid does is open a very small pilot valve. This controls the passage of air bled from the "P" or pressure port of the valve. The main valve is pneumatically operated by this air, switched by the solenoid.

The advantages of this arrangement, using the air pressure within the valve to do the work, are dramatically reduced size and power consumption of the solenoid, and a faster response. The disadvantage is that this type of valve is incapable of operating without pressure applied – as in a vacuum system.

Also the design of spool or poppet used in a valve may rely on positive pressure for its operation. e.g. A poppet may be pushed on to a seat by positive pressure, but "lifted" back off by vacuum, resulting in a leak. For this reason internal design may preclude ostensibly suitable valves from vacuum applications.

Series VT Not Available In The USA

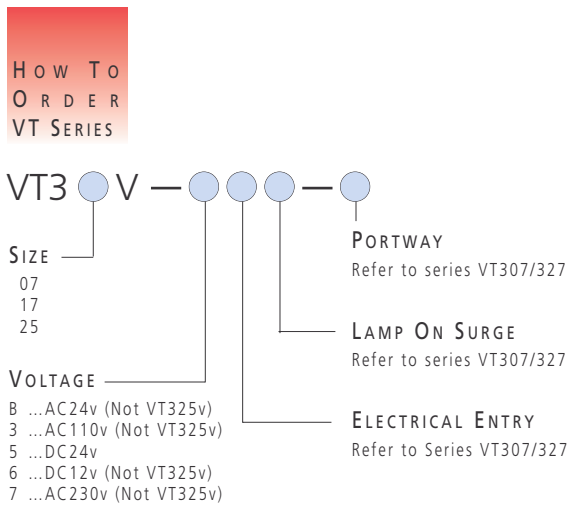

VALVE TYPES AVAILABLE

To operate a solenoid pilot valve in a vacuum system, a separate pressure supply must be supplied to the valve to move the spool or poppet as described above. This is known as External Pilot type and can be used when a separate positive pressure supply can be provided.

The alternative option is to operate the spool directly with the solenoid – the "direct acting" type. This can be used in a pure vacuum system, when no positive pressure supply is available.

PNEUMATIC PRESSURE SWITCH: SERIES ISG

ISG130-031

FOR FURTHER TECHNICAL DETAILS ON THIS PRODUCT CONSULT SMC CUSTOMER SERVICE

DIMENSIONS

PNEUMATIC PRESSURE SWITCH: SERIES ISG

- Do not set differential below the minimum specified.
- The scale is for reference use only. Use gauge for accurate setting.

Installation:

- The switch can be installed vertically or horizontally.
- Surge Absorber should be used in liquid lines to avoid pulsating pressure.
- Ensure wiring is clear of mechanism movement.
- When wiring industrial type non water proof units ensure earth wire is fitted.

COMPACT PRESSURE SWITCH: SINGLE CONTACT SERIES IS1000

- ✓ Compact and Light Weight (50mm x 23mm x 15mm)
- ✓ Operational Pressure set made easy by Scale Plate
- ✓ Shield Plate attached to prevent external magnetic interference
- ✓ Long Life

TECHNICAL SPECIFICATIONS

Model	IS1000-01

CONTACTS

- When detecting ON-pressure signal, note that set pressure on scale plate plus ON-OFF differential will be ON-pressure signal.
- Don't use with corrosive fluids.
- When piping switch by hand, hold body not wires.
- Electrical wire must not be subjected to excessive force.

CIRCUIT AND ELECTRICAL CONNECTION

RED LEAD WIRE -

Connect with blue (+) side of the direct current to actuate the switch.

WHITE LEAD WIRE -

Connect with the inout terminal of the sequence controller or the DC relay or other load since this is the switch output.

BLACK LEAD WIRE -

Connects with minus (-) side of the direct current to actuate the switch.

D1 - Reverse-connection preventing diode

D2 - Surge killer (Surge absorbing diode)

D3 - Surge killer (Surge absorbing diode)

TR - Output transistor

SETTING INSTRUCTIONS

HOW TO PRESET PRESSURE SWITCH:

Keep pressing the push button (1) SET and turn the pressure set trimmer (3) P.SET and figures are shown on the pressure display board (4) LCD. (The preset pressure increases when the pressure switch is turned clockwise and it decreases when turned counterclockwise.) After presetting, return the push button (1) SET to the original place, and the pressure on the line side is shown on the pressure display board (4) LCD.

HOW TO CHANGE PRESSURE UNIT:

When the unit change switch (5) UNIT is adjusted to each position, the unit and figures of the pressure display change. P:psi, K:kPa, kgf:kgf/cm², M:MPa, b:bar

ALARM DISPLAY

When the pressure reaches within +10% of the value preset by a pressure switch value, the LCD lights to show that the pressure is approaching the preset value.

When the line pressure becomes lower than the preset pressure, the LED (red) of (2) ALM lights and the switch turns on.

SWITCH OUTPUT FUNCTION

- Setting of Pressure Switch
- By setting the pressure trimmer, pressure is set.
- Pressure becomes bigger at the clockwise direction, and for the high vacuum rate, turn the trimmer to the counter-clockwise direction.
- Please use the ⊖ driver which has the adequate size for the trimmer, and turn it easy with fingertips.

VACUUM/PRESSURE SWITCH OR TRANSMITTER WITH OPTIONAL BACKLIT LCD PRESSURE INDICATION SERIES ZSE4/ISE4

- ✔ Large LCD Display shows actual pressure and permits easy setting of ON/OFF
- ✔ Series allows choice of applicable pressure range and output type
- ✔ A variety of switch output modes can be selected by push button settings
- ✔ Display can be set to show peak or minimum pressures during normal operation
- ✔ Complete Self Diagnosis with Error Indication
- ✔ Panel Mountable

PRECAUTIONS:

- 1 When handling the switch, hold the body, not the wire. Electrical cable must not be subjected to excessive force.
- 2 When connecting the switch, use a spanner on the hexagon fitting. NEVER use tools on the switch body.
- 3 Do not use switch near corrosive materials.
- 4 The switch is not liquid sealed. Protect from rain, dew, spray or use enclosed type ZSE4BD/ISE4BD as shown on page 7.11

ERROR INDICATION AND INSTRUCTIONS

When an error occurs, take the following steps.

Display	Situation	Solution
	Set data is corrupted by some external influence	Push "Reset" and re-insert settings
	Over current is evident in (Output 1) switch	Switch off power supply. Remove cause of the excess load.
	>500 kPa pressure applied to vacuum switch. 150% of rated pressure applied to pressure switch	Setting pressure must be less than maximum rated pressures

• Hysteresis mode

ZSE:When the values of P1 and P2 are the same or when P1>P2 within two digits, the hysteresis will be automatically two digits for the set value of P1.

ISE:When the values of P1 and P2 are the same or when P1>P2 within three digits, the hysteresis will be automatically three digits for the set value of P1.

• Window comparator mode:

ZSE:The hysteresis is two digits, so separate P1 from P2 by five digits or more and set them.

ISE:The hysteresis is three digits, so separate P1 from P2 by seven digits or more and set them.

 Weight 250g (incl. guage & 5m lead wire)
 Port Size..... Rc 1/8
 Air consumption 16 l/min (@0.10MPa Supply Pressure)
 21 l/min (@0.15MPa Supply Pressure)
 25 l/min (@0.20MPa Supply Pressure)

1MPa = 145PSI

SETTING INDICATOR
 Red LED = Output is OFF
 Green LED = Output is ON

NOZZLE TYPE

The detection nozzle should have an I.D. of between 1.0~2.0mm and 2mm in depth. Avoid chamfering the edge of the nozzle. Chamfering causes a narrower detection distance range.

PRECISION REGULATOR SERIES IR1/2/3000

- ✓ Compact and Lightweight
- ✓ Easy Setting
- ✓ Excellent Flow Characteristics
- ✓ Can be combined with (N)AF Air Filter and/or (N)AM (Mist Separator) due to the adaptation of the Modular Style Body

ELECTRO-PNEUMATIC REGULATOR SERIES ITV2000, 3000

- ✓ Air Consumption is near zero l/min (ANR) at desired set pressure (Balanced Condition)
- ✓ Zero and Span Adjustment is possible with No Air Pressure
- ✓ Easy to read with LED with choice of 5 units of measurement
- ✓ 4 Input Current/Voltage Range Options
- ✓ 2 Monitor Options - Analog or Switch (NPN or PNP)
- ✓ Plug-in Wiring with Removable Cable (Straight or Right-Angle Plug)
- ✓ IP65 Protection Standard
- ✓ Same Mounting Dimensions as IT Series (Same Bracket) for Stand-alone use with Threaded Ports

ELECTRO-PNEUMATIC HYBRID REGULATOR SERIES VY

- ✓ Simple Construction
- ✓ Easy to Connect
- ✓ Choice of Signal Voltage Ranges
- ✓ Wide Range of Body Sizes with Common Control Unit
- ✓ Internal and External Pilot Versions Available
- ✓ Integral Pressure Sensor and Amplifier
- ✓ High Relief Capacity to Exhaust

An applicable solution for applications where the precision and response of the IT range is not required. The VY-HyReg Range is constructed by utilizing a standard control unit either alone (VY1D00-M5) or as a Pilot Valve controlling one of the Range of VEX1 Power Valves.

TECHNICAL SPECIFICATIONS CONTROL UNIT

Applicable Fluid	Dry Air, Inert Gas
Required Filtration Level for Supply and Pilot Air	5(m)
Lubrication	Unnecessary (see note 7)
Ambient and Fluid Temperature	0 - 50 °C / 32~120°F
Maximum Operating Pressure	7PSI ≤ (128PSI / 0.88 MPa)
Set Pressure	0.5 Kg/cm ² ~ Supply Pressure
External Pilot Supply Pressure (For VY1*01 Type)	Set Pressure ~ 130PSI / 9 Kg/cm ² ≤
Control Signal Voltage	1 ~ 5 V DC Standard 0 ~ 10 V DC Available as an Option
Control Signal Power Requirement	Less than 1mW
Power Supply Voltage	24 V DC ± 10%
Power Consumption	1.8 W maximum
Electrical Connection	DIN Plug
Cable Gland Size	Suits 4 ~ 6.5 mm Cable
Bleed Air Consumption (at 9 Kg/cm ² Supply Pressure)	Maximum 10 nl/min
Mounting	Any Orientation

Notes:

- Avoid mounting the valve in a position where it will be subject to vibration.
- Ensure that pipework is thoroughly clean and free of water and debris during installation.
- Use a three-core screened cable for signal and power. Conductor diameter minimum 0.5mm² each core
- Wiring - terminal designations are molded onto the valve body.
- The valve bleeds air to exhaust when energized so operation without a silencer is not recommended.
- If the valve is used with lubricated air, the factory pre-lubrication will be washed out so lubrication must be continued.
- If lubricated air must be used, the external pilot type (VY1?01) and oil-free air supplied to the pilot port.
- Manifold mounted versions of the VY-Hyreg are available. Please contact your local SMC Sales Office for details of this type.

Wiring: The use of three-core screened cable is strongly recommended with the screen earthed at the end away from the VY Valve.

Terminal Designations are as follows:

- 1 = 24v Power Supply
- 2 = Control Signal
- 3 = Common Negative for both power and signal.
